The new markup features in AutoCAD 2023 are designed to be complementary to your existing drawing and production processes and provide you with greater efficiency and increased productivity. One of the most important features of AutoCAD 2023 is the ability to import feedback directly into your designs, both on paper and on the web. Send feedback to the modeler, including markups that were placed on paper, and use the imported markups to make design changes instantly on the screen. Rapid markup import is a component of the new Markup Assist functionality. The new markup import functionality allows you to directly insert your paper markups into the drawing and update the model. Imported markups are stored as groups and can be used as many times as needed in the same drawing. You can download the Microsoft Windows and Mac OS X versions of AutoCAD 2023 at the AutoCAD web site.

Instead of just measuring the output, you can gain insight into a model's internal processes with the new Dynamic Output capability. By defining the type of data to be collected from a model, you can have a breakdown of the input, intermediate results, and output for one or more line segments. Extend the available space in the Output Profiler window. Make more room to display more output for a model, and more details for each

object type, in your Output Profiler. When a model is sent to the Output Profiler, the length of each line segment is determined. This length is used to determine the available space in the Output Profiler window. Now you can expand or contract the available space on the Output Profiler window. A new Line Proximity feature provides you with more control over the proximity of lines that intersect. For example, you can add a line using a combination of the mouse or a stylus and choose to have that line end as close to the specified endpoint as possible, or as far away as needed. As part of the new output functionality, you can now display and control Output Profiler functionality on the fly.
