The version of AutoCAD launched in 1982 is the first version of the product. It was a very simple program, only supporting line drawings and schematic drawings. Early versions were targeted at manufacturers, engineers, and architects. As the AutoCAD programs evolved, it has become a basic CAD application that can handle 2D drawing, technical drawings, and presentation slides. Learning AutoCAD

Metabolic engineering of the *Klebsiella pneumoniae*-synthesizing quorum sensing molecule, N-formyl-L-ornithine-based autoinducer-2. *Klebsiella pneumoniae* is a Gram-negative bacterium that is ubiquitous in nature, including the human gut, and is widely distributed in hospital environments. *K. pneumoniae* causes bloodstream and urinary tract infections, and *K. pneumoniae* producing extracellular polysaccharide (EPS) is the most virulent form. In this study, we developed a method for synthesizing high-purity N-formyl-L-ornithine-based autoinducer-2 (N-(L-formyl-L-ornithine)-AI-2) using a *K. pneumoniae* strain that was auxotrophic for the amino acids required to generate AI-2, L-ornithine, and L-citrulline. Here we present the metabolic engineering of this strain for AI-2 synthesis, and provide a method for the efficient production of pure AI-2 that can be used to understand the cellular roles of AI-2 in bacterial physiology.

Prevalence of *Chlamydia trachomatis* and *Neisseria gonorrhoeae* in the Amsterdam area among men in sexual relationships with female partners who have paid sex: an observational study. This study sought to determine the prevalence of *Chlamydia trachomatis* and *Neisseria gonorrhoeae* infection among men who have sex with men (MSM) in the Amsterdam area. Among 578 MSM, 72 (12.6%) had an urethral or rectal specimen tested for both *C trachomatis* and *N gonorrhoeae*. *N gonorrhoeae* was detected in 30 (42.9%) and *C trachomatis* in 26 (36.1%) of the men. *Chlamydia trachomatis* and *N gonorrhoeae* were frequently found in concordance, in that a man was infected with both or with one of the two organisms at least once. The number of sexual partners was associated with *C trachomatis* but not with *N gonorrhoeae*. HIV positivity was positively associated with *C trachomatis* and *N gonorrhoeae* positivity, but not with *C trachomatis* or *N gonorrhoeae* alone. Controlling for HIV positivity, there was no increased risk of *C trach*
