AutoCAD history AutoCAD history was written by Bernhard Hommel, a freelance writer for Autodesk. The following information is from the entry on the Autodesk website and used with permission. Background The first version of AutoCAD was AutoCAD 11, which was the result of the merger of several AutoCAD, Structural and Drafting Suite products. The AutoCAD 11 design team's goal was to make AutoCAD a powerful, yet easy-to-use program. This revision introduced many new user-friendly features and improvements, such as the ability to animate a viewport, mouse control on graphics objects, dynamic prompts, and variable-block drawings. AutoCAD 11 also introduced the principle of building composite objects that were joined by common entities, or blocks. The block system was the starting point for AutoCAD 14. AutoCAD 14 (originally known as AutoCAD Architecture) introduced a completely new command structure, allowing the designers to perform architectural modeling more effectively. AutoCAD Architecture was an evolution of the block system. It replaced the previously used block system with new AutoCAD blocks and redefined the AutoCAD workspace. It was the first release to have multiple AutoCAD drawing templates and worked with AutoCAD Architecture Design 2009 (AD 2009). AD 2009 introduced the concept of families, which allowed designers to create an architecture document (design package) in a single drawing. The design package was used to provide project managers with an all-in-one design environment. When AutoCAD Architecture Design 2011 (AD 2011) was released, the design package was renamed to design. This release was the first version to use the software's new three-dimensional (3D) features. AutoCAD 2010 (AD 2010) made its debut with the ability to import 3D models and the ability to work in 2D and 3D environments on a single drawing. The release was heralded by a special "new" user's guide that highlighted the program's many user-friendly improvements and new features. Although AutoCAD Architecture 2009 was and still is a good program, it was not able to evolve with the times as it had relied on a single designer to create a project. Because of this, AD 2009 was discontinued and the design.package with its 3D features was developed from AutoCAD Architecture 2008. Features AutoCAD

What is Autocad 2020 (v20) The 2020 release of Autocad includes new tools, workflows, feature enhancements, and more. It also includes a new approach to data management, improved support for non-Windows operating systems, and a new Microsoft Excel connector. The new Autocad 2020 release also introduces features for model data sharing and 360° rendering. New Visuals Autocad 2020 introduces new features and enhancements to Autocad's UI, including a new look and feel, new screen transitions, new system colors and visual indicators, and new ways to see and edit your drawings. This version also introduces the Edit Ribbon as the primary tool to edit and organize your drawings. This redesign allows you to quickly access commonly used tools, including the Undo feature, Tools, and the Drawing Units drop-down menu. The Ribbon also makes it easier to locate and edit your drawings using the commands, functions, and properties within those drawing tools. New Features Autocad 2020 introduces several new feature enhancements, including a number of new connectors. In addition to the existing Excel connector, you can now connect to a Salesforce, a Business Objects, and a Birst application. These connectors can be used to view, edit, and store data stored in each of those applications, and export drawings to Excel or other applications. The new Product Connector can be used to import and export product information from BOMs, Inventories, and the Production List. A new Design Connector is used to collaborate with other Autocad users by sharing design information. In addition to allowing file-level collaboration, the Design Connector can be used to store information in a centralized location. It can also store and display this information at the command bar in the form of colors, markers, text, and other graphics. A new method of calculating the perimeters and other areas of drawings has been introduced in Autocad 2020. Instead of using a traditional, graphical, calculator, the perimeter calculation engine now utilizes the new command, Area. This command calculates the area of a polygon and is used by many other commands, including Area, Distance, and Diameter. A new method of presenting data in 3D has been introduced in Autocad 2020. Instead of using 3D tools, such as the new Toolbar, you can now use the new System Colors tool to view data in 3D. These new 3D views are
