Autodesk's AutoCAD software is a feature-rich CAD application used for various types of drafting and design work. It also serves as an image editing software used to create 2D and 3D visualizations. The name "AutoCAD" is derived from Autocad which is a phonetic translation of Autoarquitectura del cadí, the technical language used by the architects of Spain in the mid-20th century. The name Autocad was registered by Autodesk around 1995. Initially AutoCAD ran only on Windows, but with the release of AutoCAD 2017, the app started running on Windows, Mac, and Linux platforms. AutoCAD history AutoCAD was first released in 1982. It started off as a desktop app that ran on microcomputers with internal graphics controllers. Later, it was released as a concurrent to AutoCAD LT. In 1992, Autodesk released its first C++-based drawing application, which was also called Autocad. In 1996, AutoCAD became a commercial software application. Autodesk released a new version of AutoCAD called AutoCAD LT version 2000 which was the first ever cross-platform product. In 2005, Autodesk released AutoCAD 2008, which was an update to AutoCAD LT 2000. The main highlight of the release was the introduction of new features including DWG output and DGN output formats. AutoCAD LT 2009 was released in the year 2009 and it introduced a new 2D and 3D modeling tools and a new drawing environment. Auto

Programming with Microsoft Excel Microsoft Excel is a spreadsheet program and a development platform for Excel macros. Excel VBA scripting is similar to Visual Basic and can be used with Excel for most tasks. Microsoft Excel can be integrated with a MS Access database and is used for creating web-based forms to collect information. Excel Services for Windows SharePoint Services and Microsoft Office SharePoint Server 2007 extend the use of Microsoft Excel to the web, allowing information to be easily shared and manipulated, and for it to be published and viewed from across the web. Presentation PowerPoint presentations are a kind of screencast, but unlike screencasts they are more formal. They are primarily used to deliver information to groups of people in a formal way and not for recording technical processes. The information is generally presented in slides, which are effectively mini-PowerPoint documents. Presentations can include animations, text, audio, and video, among other elements. Software engineering In software engineering, software is either "developed" (by application of "engineering principles" in an approved manner) or "produced" (by application of "engineering techniques" in a more pragmatic manner). According to software engineering, development processes are well-defined and industry-standard practices. Software development life cycle (SDLC) is a cyclic and repeatable process. The process is defined in a way that the end product is more specifically defined at each stage, and the development quality and productivity are improved at the same time. In terms of software life cycle, Agile software development method is based on iterative development using incremental features and constantly focusing on short-term goals. In this process, a clear, well-defined specification of the product must be shared by the team from the very beginning and it must be written in such a way that it is an input for the development process. To do so, collaboration with stakeholders is extremely important. Agile methods are strongly connected to the nature of software development itself, and are used mostly in agile software development. Production process The traditional approach of producing software is based on hardware production. The production process is defined as a sequence of stages from the order of components, to the manufacturing, testing, inspection, and packaging. The software production can be considered as an analogous of hardware production. One of the most significant aspects of software production is the development of "design documents" for the software. As in hardware, these design documents are used to define the product, describe the planned functionality a1d647c40b
