Also this way doesn't need to use the actual properties of the object. Create a plane, say, 1m by 1m. Make the plane a mask in the scene (the properties window > the SCENE tab) using the side of a box as the guide Scale to your liking. Then use the "Put" command. The bounding box will be scaled perfectly with the plane. Another tip

A: To double-check, I just exported your simple sphere/cylinder to my timeline. It was exported as an.ndf file, and I checked the Contents folder. Sure enough, there were the files for.md2. Have you looked in there? I would export the.md2 using the plugin, then place it in the scene. If you want it to appear fully-transparent, make sure to set the camera's Depth to 0.0 with the camera viewport disabled. You might also consider rendering with the Stereo Sketch plug-in. If all you want to do is a simple water simulation, it's probably overkill. If you want to have multiple fish swimming around, it's a great choice. You can set the simulation to render on a single frame (or multiple frames), so you can render it like you normally would and then assemble the frames. 1. Field of the Invention The present invention relates to a linear motor usable for a slide table for a microscope, and further relates to a slide table capable of being driven linearly in two directions and mounted on an optical system of the microscope. 2. Description of the Prior Art A conventional linear motor often used for a slide table of a microscope is usually a so-called slide-surface type having a plate-shaped stationary member fixed on a surface of a microscope base, and an end plate having an annular groove formed thereon is slidably mounted in the stationary member. The annular groove of the slide plate rotatably supports a lead screw and is rotated by an electric motor through the lead screw, thereby linearly driving the slide plate which is fixed to the slide table. A fine adjustment mechanism is provided to finely adjust the position of the slide plate. The above described conventional linear motor has a defect in that it requires fine adjustment for adjusting the position of the slide plate while in operation. Such fine adjustment is difficult to perform by hand.Sara Morales Sara Morales (born December 24, 1998) is an American teen actress best known for portraying Anna Elizabeth 3da54e8ca3
