The transition from PS to LR was smooth. The same slider menu still works. If you do not do a lot of work with your images you will be fine with the old layout and features. But if you do a lot of tweaking and image manipulation this new layout will be a challenge. You can still do a lot in the menus, but it will take a bit more time. You cannot do everything and while the person will switch off in a second after hitting a few uglier buttons the transition phase is really frustrating and I did not like the introduction of a direct PP plugin by Adobe. But I will try to make the next one better.

Regards! Paul I've been using Lightroom 4 as my main editing package for nearly 3 years now. The designers I know are all using PS. I like the way DP4 gives you the tools rather than the process. In my experience DP3 has also

been fine but in a short time I also found this irritating. I'm new to Lightroom as well as the Adobe world, so learning the software was a big undertaking. When this version was announced I was in Thailand, an expressive country in the middle of nowhere. At that time I needed to make a brand new photo library. I could have upgraded Lightroom from Lightroom 4. But I didn't purchase Photoshop because I would have to have the same library and by this time I do not plan to upgrade to latest versions of computer software. After updating from 4 to 5 I couldn't figure out how to place a print in the print preset. I learned quite quickly how to do that. Now I'm trying to learn Lightroom 5.

The reason is that it's one of the easiest way I can show them what's possible when they open the most expensive and highly technical tool in the market. And the best part is that I can see what's actually in the complicated vs. raw layers. I like it because I can easily go color by color and stroke by stroke.
